

Where are these?

These pictures taken by club member Randy Kursinsky are from the following three areas -- BUT which location goes with which picture? Make your guess, then scroll down to see how you did!

1. Mammoth Hot Springs in Yellowstone
2. Pipestone National Monument in MN
3. Teddy Roosevelt Nat'l. Monument in ND

Here They Are!

The mound of red rock threads is from Teddy Roosevelt National Monument in ND.

The gray rock that looks like a coral fossil is actually found at Mammoth Hot Springs in Yellowstone just above the main area (and is not a fossil)

The sandstone slabs with the ripples in it are from in front of a souvenir shop at Pipestone National Monument in MN
